DETAILED ACTION

1. Information Disclosure Statement filed on 11/12/03 has been received.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Zittlau et al (U. S. Patent no. 6,213,567).

Central control unit 13, distributed ECUs 4

Each actuator is assigned an identifier (called an address see column 6 line 27) and gets a time slice (called a frame). There is a time delay between actuator time slices.

Specific actuators can be addressed by the central controller. See Column 5 lines 41-43. NOTE: ABS requires the ability to have specific pressures at specific wheels and therefore, requires some sort of addressing system inherently.

The network detects and removes an ECU from the network (see column 7 errors 4 and 5).
